As we know that Apache, PHP, and MySQL meant to run in a Linux environment and not available natively for Windows platform.

So, in such circumstances, third-party applications such XAMPP and WAMP servers can be used. People those are looking to run Apache web server including PHP and MySQL on Windows 10, they can use the popular WAMP server. In a similar way the MAC users can try MAMP or XAMPP and Linux can install LAMP with help of just a few commands to setup whole web server package along the PHP environment to develop PHP based applications.
